PROFESSIONAL SUMMARY

Accomplished Technical Lead and Senior Full-Stack Engineer with over 9 years of experience architecting highly scalable, service-oriented distributed systems utilizing JavaScript, Node.js, TypeScript, React.js and Angular. Proven track record of leading development teams in agile environments, spearheading end-to-end enterprise web projects, processing big data in distributed environments, and executing seamless system migrations that deliver up to 40% in operational cost savings. A highly collaborative leader responsible for team Scaling, Performance, & Quality, adept at driving technology choices, defining project scope with stakeholders, establishing engineering best practices, and troubleshooting complex technical issues to deliver highly available, secure solutions.

SKILLS

- **Languages & Frameworks:** Node.js, JavaScript, TypeScript, Express.js, Nest.js, Angular, React.js, GraphQL, RxJS, RESTful APIs
- **Architecture & Cloud:** Microservices, Service-Oriented Architecture (SOA), Distributed Systems, Event-Driven Architectures, Micro-frontends, Frontend & Backend Principles, System Design (HLD/LLD), Multi-Tenancy, Single-SPA, Monorepo
- **Databases & Messaging:** MySQL, PostgreSQL, MongoDB, Redis, RabbitMQ, Kafka
- **Tools & DevOps:** Docker, Kubernetes, AWS, Jenkins, CI/CD Pipelines, Git/GitHub Source Control
- **Testing & Automation:** Playwright, Jest, Test-Driven Development (TDD), Claude, MCP
- **Methodologies & Leadership:** Agile Environment, Sprint Planning & Task Estimation, User Story Creation, Technical Strategy, Code & Design Reviews, Stakeholder Management, Mentorship

WORK EXPERIENCE

HCL Tech (Client: Emirates NBD)

Technical Lead

May 2024 – Present

- Architected a high-performance application orchestration framework using Node.js and TypeScript, driving the adoption of new technologies, troubleshooting complex technical issues, and contributing to CI/CD automation and process improvements that drove efficiency and efficacy, reducing overall development effort by 55%.
- Led the design and implementation of complex features for the end-to-end migration of a core Credit Card application to a scalable Node.js distributed system, establishing real-time streaming pipelines, which reduced operational costs by 40% and increased efficiency by 30%.
- Engineered an automated E2E testing suite leveraging Playwright and Claude (via MCP) integrated with GitHub repository source control, drastically improving QA processes, reducing manual testing effort by 75%, and accelerating release cycles.

- Collaborated with cross-functional teams and stakeholders to define project requirements, scope, and timelines, driving technology and tool choices while leading code and architecture reviews to guarantee system Scaling, Performance, & Quality.

MatchLog Solutions Private Limited, Bengaluru

Senior Software Engineer

Apr 2021 – May 2024

- Designed and developed the Transport Management System (TMS), Triangulation (TRI), and Container Assessment Survey Application (CASA) by writing highly testable and scalable code using Jest to deliver real-time logistics solutions, driving a 30% improvement in fleet utilization.
- Architected a highly scalable service-oriented platform using JavaScript, Node.js, and React.js/Angular, seamlessly integrating user-facing elements developed by front-end developers with complex server-side logic, supporting 100,000+ monthly container reuse operations for the STinder product via offline batching and messaging systems.
- Directed end-to-end delivery of complex web development projects for supply chain optimization, actively participating in sprint planning, accurate task estimation, and user story creation, ensuring timely completion and mitigating empty runs by 40%.
- Engineered highly reusable frontend components and optimized Node.js backends using RxJS and TypeScript, resulting in a 50% decrease in development workload through successful collaboration with frontend developers.
- Provided innovative solutions utilizing robust single-spa micro-frontend architecture to develop high-quality applications, enhancing maintainability and reducing enterprise application page load times by 35%.
- Utilized GitHub repository for source control and configured Jenkins CI/CD pipelines to automate deployments across Docker and Kubernetes environments, accelerating release cycles by 40%.
- Led and mentored a team of 5+ web developers in an agile environment, setting up engineering best practices through rigorous code reviews and architecture discussions to constantly improve technology use.

Shiplyst Systems Private Limited, Bengaluru

Software Engineer (Grade 2)

Aug 2019 – Mar 2021

- Automated background processes to retrieve data from third-party APIs using asynchronous programming, achieving a 50% reduction in data processing time.
- Designed a high-performance matching algorithm for search features, significantly improving user experience and reducing API response latency by 45%.
- Developed globally reusable validators and frontend UI components in Angular, accelerating feature delivery across agile engineering teams by 30%.
- Upheld software quality through Test-Driven Development (TDD) and rigorous debugging, ensuring a 99.9% defect-free status for major production releases.

Canvas Digital, Bengaluru

Full Stack Developer

Nov 2018 – Aug 2019

- Developed a full-stack appointment booking engine with integrated e-commerce capabilities and RESTful APIs, driving a 25% increase in online bookings.
- Engineered a marketplace bidding portal complete with advanced listing capabilities, optimizing the backend to seamlessly handle 10,000+ concurrent users.

Intecons Software Lab, Bengaluru

Programmer Scale-1

Jan 2017 – Jan 2018

- Engineered a real-time communication chat application leveraging WebSockets and third-party APIs, facilitating high-quality calls for 5,000+ active users.
- Integrated mapping and autocomplete APIs to enrich core application functionalities with advanced real-time data features, improving user engagement by 20%.

EDUCATION

Master of Computer Applications (MCA)

National Institute of Technology (NIT), Jamshedpur

Bachelor of Computer Applications (BCA)

Swami Vivekanand Subharti University, Prayagraj
